For those who are hungering after a better understanding of God, and for those who need to be led to Christian Science, this book is sent into the world. The author wishes

to state emphatically that the truths contained herein have been gained wholly through an earnest study of the Bible and of the writings of Mary Baker Eddy, the beloved founder of the modern Christian Science movement. This book is sent forth with the simple wish that it may find a welcome in answering some of the questions which were perplexing to the author and which may be perplexing to thousands of others brought up under the types of religious teachings, which have been widely prevalent in recent centuries, and are largely followed at the present.
