Did you ever wonder how Mother Nature takes care of bugs, frogs, worms and fireflies when we no longer see them during the winter months? Do they hibernate, die off or migrate during that time of year? And what about caged birds who would normally head south for the winter? Phyllis Russell-Gilmer provides the answers to these questions and more, in her exciting new book, "Where Do Crickets Go When Winter Comes?" You'll meet Casey Cricket, Wanda Wasp, Fergie Frog and others to learn about their winter activity or lack of. Phyllis' new book will provide your children with a unique exposure to science while entertaining them as well.
