作者介绍:

Richard Ritter von Strigl (1891-1942) was one of the most brilliant Austrian economists of the interwar period. As professor at the University of Vienna he had a decisive influence on Hayek, Machlup, Haberler, Morgenstern, and other fourth-generation Austrian economists.

Very few classic works on capital and business cycles in the Austrian tradition have been translated from the original German. Now Strigl's important contribution to Austrian capital theory is brought to the English-speaking world for the first time. The book links Eugen von Bhm-Bawerk's production theory and Mises's business cycle theory, and gives a pathbreaking account of the role of consumers' goods within the structure of production.

Translated by Hans-Hermann Hoppe, with an extended introduction by Jrg Guido Hlsmann, Capital and Production is the essential foundation, both in theory and in the history of thought, to Austrian macroeconomics.

米塞斯研究院于2019年发表的肖斯塔克《维持生计基金是经济增长的核心》一文恰似为《资本与生产》量身定制的引介，我们几个译者可以借此不必再费更多脑筋。特别，该文译者禅心云起采用了“维持生计基金”这个译名，是对我们翻译、校译该书工作的基本肯定。2019年的这篇...
