【Introduction】

According to the Information Sheet presented in 1988 by the Department of Entomology of the British Museum (Natural History), "More than 10 million insect species are thought to exist, of which some 900000 are described, rising at about 7000 per year."

In 1935-1941, the late Dr. Wu, Chenfu F., the founder of modern entomotaxonomy of China in his famous monumental work-"Catalogus Insectorum Sinensium" Vol.I-VI has recorded 20069 species of insects in China. How many species of insects has been recorded in China since then? Not long ago, there was no answer to this question. The author holds that, today, it is time to fill up the historical gap. For establishing "Chinese Insect Residence Booklet", the author started working on the "List of Chinese Insects" Vol.I-IV in 1986. The records of Chinese species are mainly compiled for "Zoological Record", "Catalogus Insectorum Sinensium", "The Economic Insect Fauna of China", "Fauna of China", "Entomotaxonomia", "Acta Entomologica Sinica", "Acta Zootaxonomica port on National Condition of Biodiversity in China" (1998), up to 1995 more than 51000 species of insects were known to China. While in this "List", the records of Chinese insects have exceeded 70000 species. The new species included in this "List" are based on data up to 1990.

The contents of the different volumes are as follows:

Vol.I Protura, collembola, Diplura, Thysanura, Odonata, Ephemeroptera, Blattaria, Mantodea, Isoptera, Zoraptera,

Plecoptera, Phasmatodea, Grylloblattodea, Orthoptera, Embiidina, Dermaptera, Homoptera, Hemiptera, Psocoptera,

Mallophaga, Anoplura, Thysanoptera.

Vol.II Coleoptera, Strepsiptera, Megaloptera, Neuroptera, Raphidiodea, Mecoptera, Trichoptera.

Vol.III Lepidoptera

Vol.IV Diptera, Siphonaptera, Hymenoptera

In this Volume included the Orders of Chinese insects as follow:
