Today nearly everyone is familiar with holograms, three-dimensional images projected into space with the aid of a laser. Now, two of the world's most eminent thinkers -- University of London physicists David Bohm, a former protege of Einstein's and one of the world's most respected quantum physicists, and Stanford neurophysiologist Karl Pribram, one of the architects of our modern understanding of the brain -- believe that the universe itself may be a giant hologram, quite literally a kind of image or construct created, at least in part, by the human mind. This remarkable new way of looking at the universe explains now only many of the unsolved puzzles of physics, but also such mysterious occurrences as telepathy, out-of-body and near death experiences, "lucid"

dreams, and even religious and mystical experiences such as feelings of cosmic unity and miraculous healings.

## 作者介绍:

麦克·科尔曼·塔尔伯特(1953.9.29—1992.5.27),美国作家,著有多本强调古代神秘论与现代量子力学之间相同之处的书籍。他还建立了一个关于现实的理论模型,该模型表明物质宇宙就是一幅巨型全息图。对他来说,超感应力、心电感应以及其它的超自 然现象都是真实存在的,并且都是现实全息模型的产物。
