isbn:9780470236765

This book discusses maps as data with data structure implications; roving windows; spatial data modeling and management; assessing variability, shape, and pattern of map features; overlaying maps; cost-benefit analysis; algorithms involved in slope, distance, and connectivity; and cartographic and spatial modeling. A disk containing four-color graphics, including charts and maps, is also available. Provides a GIS glossary. Includes a list of recommended readings for each topic. Compiles international GIS instructions and presents contact details and information on each.
